EDUCATION

The University of Georgia

B.S. in Computer Science, Emphasis in Computer Systems

Athens, GA

Aug. 2024 – May 2026

Georgia College & State University

Transferred; Dean's List

Milledgeville, GA

Aug. 2022 – May 2024

EXPERIENCE

Saia LTL Freight

Machine Learning Intern

Johns Creek, GA

May 2025 – Aug. 2025

- Engineered an end-to-end automation pipeline for RFP data ingestion, reducing the processing cycle from over 3 months to just 8 hours (a > 99% reduction) and eliminating manual data entry errors.
- Designed and trained a Siamese neural network using Keras for one-shot similarity matching; achieved a 0.99 AUC-ROC on production validation sets, successfully automating the classification of high-variance RFP documents.
- Built a recursive data-generation pipeline using a score-based search across live pricing servers; synthetically expanded the training set by 5,000+ examples to achieve model convergence.
- Implemented a robust data validation module using Pandas and strict schema enforcement, preventing downstream corruption in CRM systems by rejecting malformed records at ingestion.
- Re-engineered a legacy C# process to fully integrate the new ML pipeline with enterprise CRMs (Salesforce & Microsoft Dynamics), providing sales teams with validated, near real-time RFP data.

Contractor (Part-Time)

Aug. 2024 – May 2025

- Collaborated with the Finance team to develop a predictive pricing model using XGBoost, utilizing freight density and lane profitability features to justify discount tier recommendations.
- Provided ad hoc SQL support and data extraction for the analytics team, resolving urgent data requests for business stakeholders during the academic year.

Data Engineering Intern

May 2024 – Aug. 2024

- Automated ETL pipelines to process over 50 million records from legacy AS/400 databases into Power BI, reducing manual data extraction and reporting time by 90% for key company reports.
- Optimized BI semantic models by authoring complex DAX and SQL queries to calculate critical business metrics (ADR, ADBC), improving underlying report query performance by over 30%.
- Spearheaded the development of an interactive 'Territory Insights' dashboard using Azure Maps in Power BI, identifying growth markets projected to capture over \$5M in potential revenue.
- Implemented a dynamic Row-Level Security model for Power BI reports embedded within a Visualforce IFrame, enabling personalized and secure dashboard access for over 500 end-users.

PROJECTS

Full Stack Movie E-Booking Platform | Next.js, React, Django, PostgreSQL, Docker

Spring 2025

- Developed a full-stack, production-ready movie booking SPA using Next.js/React and a Django REST API, achieving < 200ms response times with an optimized PostgreSQL database.
- Engineered a secure CI/CD pipeline with Docker and implemented robust security features including OAuth 2.0/JWT authentication, RBAC, reservation systems, DB triggers for user sync, and payment-integrated booking.

Audio Summarization & Transcription WebApp | React, Flask, OpenAI Whisper, T5

Fall 2024

- Architected an end-to-end AI pipeline integrating OpenAI Whisper (high-fidelity transcription), Google's T5 Transformer (summarization), and Google Cloud TTS for voice synthesis.
- Built a responsive React PWA and a Flask REST API backend, optimizing performance with efficient model caching to reduce server response times by 60%.

TECHNICAL SKILLS

Languages: Python, Java, C++, C#, SQL, JavaScript, TypeScript, Bash/Shell, HTML5 & Tailwind

AI & ML: TensorFlow, PyTorch, Keras, Scikit-learn, LangChain, OpenCV, MLOps, RAG, Hugging Face

Web & Backend: Next.js, React, Node.js, Django, FastAPI, GraphQL, Prisma, Supabase, MongoDB, Cassandra, Neo4j

Cloud & DevOps: AWS (Lambda, S3, RDS), Vercel, Render, Docker, Kubernetes, Terraform, Linux, GCP

Core Concepts: Microservices, Event-Driven Architecture, CI/CD, REST APIs, Agile, System Design
